

Experts at Gartner Research advise electronic invoicing. According to the IT analysts, suitable solutions not only satisfy statutory requirements, but also increase efficiency. Retarus eSign streamlines and accelerates the complete document workflow for sender and recipient. This transaction-safe and legally secure service enables the seamless tracking of documents like invoices, customs forms, certificates or lab reports. Manipulation by third parties can be recognized at any stage. From a legal and financial point of view Retarus eSign is the ideal solution for generating, validating and controlling signatures flawlessly in electronic invoicing. You can prove that your electronic invoices are protected against any manipulation, in compliance with local laws in more than 40 countries. Retarus supports the entire process from A to Z for both sender and recipient.

How it works

- Transaction-safe link to existing ERP systems
- Supports all signature cards of recognized trust centers
- No hardware, software or maintenance costs
- Legally secure in more than 40 countries

All relevant document information at a glance

Comprehensive and fast search

Check signatures easily with Adobe Reader

Significant added value – for sender and recipient

The IT analysts at Gartner recommend using service solutions to optimize electronic document workflow. With Retarus eSign both sender and recipient of electronic documents are fixed variables anchored in the business process. All relevant document information is automatically recorded and forwarded directly from your ERP system to our workflow connection. As a recipient you also benefit from the integration of the automatic receipt of electronic documents in the document workflow. Business records do not have to be manually entered and signatures do not have to be verified. Retarus eSign transmits the data as signed PDF documents, which you can access and file easily. Incidentally, as a member of the E-Invoice Alliance Germany, Retarus actively supports international signature standards, roaming and interoperability.

Including electronic archiving

With Retarus eSign you can archive electronic documents reliably in our data centers. Archiving outside of your company IT offers decisive advantages: you do not need your own storage capacity, the documents are optimally protected in Retarus' widespread infrastructure and thanks to our comprehensive research functions you can recover the documents in next to no time. Sender and recipient benefit twice-over if the documents transmitted are invoices – with this solution you fulfill your obligation to retain the signed invoices electronically and can easily present them for a tax audit.

Signature verification – Transaction security

Retarus eSign automatically verifies created signatures. We document the result of this verification and send it to the recipient integrated in the signed PDF document. So at any stage recipients can determine whether documents have been manipulated during transmission. You simply use the free Adobe Reader to control the signatures easily without expensive online verification. Use this efficient and completely secure solution to send and receive invoices in compliance with tax regulations for electronic invoicing throughout Europe.

Send invoices from SAP

Retarus eSign offers a whole range of advantages for users of SAP systems in particular. Our standardized interface enables the secure connection and communication between your ERP system and the signature server: You can send legally compliant electronic invoices directly from your SAP applications – the signed PDFs are created directly from IDoc files. All structured ERP output formats can be edited, not only IDoc but also XML, CSV or TXT formats, for example. You are welcome to request more information about Retarus eSign. We will be pleased to advise you!
